

This step-by-step guide outlines how to install a Storemasta Relocatable (Corrosive Substances)

Positioning

- The relocatable corrosive substance container can be lifted by crane or forklift. However, make sure the container is empty, as they must not be relocated when fully loaded.
- The location of your relocatable dangerous goods store must be according to regulatory requirements applicable, such as separation distances to protected and public places. For further details on the applicable requirements, see the Australian Standard AS 3780:2008 – The storage and handling of corrosive substances.
- If there is vegetation at the site that could become a fire hazard, make sure that it is kept short.
- You must install a [safety shower](#) within 10 metres of where corrosive chemical packages are opened.
- Chemical spill clean-up equipment and materials, such as [spill kits](#), should be installed within easy reach of the corrosives store.

Installation

- The relocatable container must be mounted on suitable footings. It must be sitting level and supported under each base plate.
- If your surface isn't level, you may acquire [PVC packers](#) to level up the unit. Ensure that all base plates are adequately supported.
- Fix unit down using anchors (T16150GH Tru-Bolts). Learn more by reading the [Ramset Stud Anchors Installation Guide](#).
- Ensure all doors on your relocatable outdoor store operate smoothly.

Also ensure you sustain compliance you will need to periodically review your control measures and carry out maintenance on your oxidizing agent relocatable store.

Get in touch

Need some more advice on the installation or use of your outdoor organic peroxide store? It's easy to get in touch with our STOREMASTA® team. Simply send your enquiries to sales@storemasta.com.au or give us a call on 1300 134 223.
